2028_REC_OOPS using Java_Week 8_Q1

Attempt : 1
Total Mark : 10
Marks Obtained : 7.5

Section 1 : Coding

1. Problem Statement

Write a program to validate the email address and display suitable exceptions if there is any mistake.

Create 3 custom exception classes as below

DotException
AtTheRateException
DomainException

A typical email address should have a "." character, and a "@" character, and also the domain name should be valid. Valid domain names for practice be 'in', 'com', 'net', or 'biz'.

Display Invalid Dot usage, Invalid @ usage, or Invalid Domain message based on email id.

Get the email address from the user, validate the email by checking the

above-mentioned criteria, and print the validity status of the input email address.

Input Format

The first line of input contains the email to be validated.

Output Format

The output prints a Valid email address or an Invalid email address along with the suitable exception

If email ends with . or contains not exactly one . after @, it throws:

DotException: Invalid Dot usage

Invalid email address

If @ appears not exactly once, it throws:

AtTheRateException: Invalid @ usage

Invalid email address

If the part after the last dot is not among accepted domains:

DomainException: Invalid Domain

Invalid email address

If all conditions satisfied then print:

Valid email address

Refer to the sample input and output for format specifications.

Sample Test Case

Input: sample@gmail.com

Output: Valid email address

Answer

```
import java.util.Scanner;
class DotException extends Exception {
    public DotException(String message) {
        super(message);
    }
}
class AtTheRateException extends Exception {
    public AtTheRateException(String message) {
        super(message);
    }
}
class DomainException extends Exception {
    public DomainException(String message) {
        super(message);
    }
}
public class Main {
    public static void validateEmail(String email) throws DotException,
    AtTheRateException, DomainException {
        if (email.startsWith(".") || email.endsWith(".") || email.startsWith("@") ||
        email.endsWith("@")) {
            throw new DotException("Invalid Dot usage");
        }
        if (email.contains("..") || email.contains("@@") || email.contains(".@") ||
        email.contains("@.")) {
            throw new DotException("Invalid Dot usage");
        }
        int atCount = 0;
        for (char ch : email.toCharArray()) {
            if (ch == '@') atCount++;
        }
        if (atCount != 1) {
```

```

        throw new AtTheRateException("Invalid @ usage");
    }
    int atIndex = email.indexOf('@');
    String domainPart = email.substring(atIndex + 1);
    if (!domainPart.contains(".")) {
        throw new DotException("Invalid Dot usage");
    }
    if (domainPart.endsWith(".")) {
        throw new DotException("Invalid Dot usage");
    }
    int lastDotIndex = domainPart.lastIndexOf('.');
    String domainExtension = domainPart.substring(lastDotIndex + 1);
    if (!(domainExtension.equals("in") || domainExtension.equals("com") ||
domainExtension.equals("net") || domainExtension.equals("biz"))) {
        throw new DomainException("Invalid Domain");
    }
}
}
public static void main(String[] args) {
    Scanner sc = new Scanner(System.in);
    String email = sc.nextLine();
    try {
        validateEmail(email);
        System.out.println("Valid email address");
    } catch (DotException e) {
        System.out.println("DotException: " + e.getMessage());
        System.out.println("Invalid email address");
    } catch (AtTheRateException e) {
        System.out.println("AtTheRateException: " + e.getMessage());
        System.out.println("Invalid email address");
    } catch (DomainException e) {
        System.out.println("DomainException: " + e.getMessage());
        System.out.println("Invalid email address");
    }
    sc.close();
}
}

```
